THE RESCUE BEGINS

B PLAN r

This drill was owned by a Chilean-American joint drilling company, was originally used to widen one of the three 5.5 inch boreholes that were already supplying the miners with goods. The angle of drilling caused pressure and issues with the necks of the drills, the curved and deep hole meant the rescuers couldn't drill vertically. The hard rock was abrasive and wore out the steel of the drill.

RIG-421

This powerful Diesel-Electric Triple Canadian drill operated by Calgary-based Precision Drilling Corporation was the last drill involved in the rescue process, with beginning to drill on September 19th after Plan B wasn't working out. The RIG-421 was
